Empirical Asset Pricing

Alex Philipov

Fall 2026

Classes and Contact

Classes	Tuesday, 10:30-13:10
Class meetings location	IN 139
Office	Enterprise Hall 329
Telephone Number	(703) 993-1762
e-mail	aphilipo@gmu.edu
Office Hours	By appointment

Course Description

This course is about efficient markets and empirical asset pricing. We start with reviewing asset pricing theories, asset pricing models, and return predictability. We then focus on cross-sectional asset pricing tests and review the standard methodologies proposed in the literature. We study tests of the CAPM and multi-factor models, including time-series regressions, cross-sectional regressions and GMM. Part of class time is also dedicated to the construction of factors and portfolios for testing. In the second part of the course, we review the applications of asset pricing models to mutual funds, hedge funds and event studies. We will complete the course with a brief review of behavioral finance.

The class will focus on in-class presentations by students, which will constitute 60% of the grade

Course Objectives

1. Develop skills to work with data and conduct empirical analysis in asset pricing
2. Gain the skills and tools to make professional presentations for an academic audience

3. Be able to critically evaluate contributions to the discipline in working and published academic papers.

Course Contents and Tentative Schedule

Date	Topic	Readings/Assignments
Wk 1	Static Asset Pricing Models	Notes 1
Wk 2		review of Fama and French (2015) (Tan) review of Fama and French (2018) review of Daniel, Hirshleifer, and Sun (2020)
Wk 3	Market Efficiency and Asset Pricing Tests •time-series tests •cross-sectional tests •Fama-MacBeth approach	Notes 1 Homework 1
Wk 4		

Wk 5 Empirical Methods — Notes 2

- •Portfolio sorts
- •Cross-sectional regressions — Brennan, Chordia, and Subrahmanyam (1998)
- •Adjusting for risk — Daniel, Grinblatt, et al. (1997)
  - BCS (1998) method
  - DGTW (1997)

Wk 6

Wk 7 Anomalies

- •Size and book-to-market — Fama and French (1992)
- •Momentum — Jegadeesh and Titman (1993), JNPS (2013)
- •Credit risk and dispersion — Dichev (1998), DMS (2002)
- •Idiosyncratic volatility — Ang et al. (2006)

Wk 8 Anomalies' explanations

- •Risk-based
  - more factors
  - characteristics vs. factors
  - dynamic models
  - alternative models (investment CAPM)
- •Estimation issues
  - Data snooping
  - Learning post-publication

Wk 9

- •Market frictions
  - Limits to arbitrage
  - Illiquidity and short-sale constraints
  - Microstructure noise
- •Behavioral
  - overreaction and underreaction
  - investor sentiment
  - prospect theory
  - optimism
  - overconfidence

Wk 10 Mutual Funds and Hedge Funds

Wk 11

Wk 12 Event Studies

Wk 13 Behavioral Finance

Wk 14

Presentation Rubric

	Needs Improvement	Fair	Good	Excellent
Calculations (25%)	Only some calculations are accurate and/or excess ambiguity exists in either steps taken to arrive at mathematical answers and/or methods selected to find solutions.	Most calculations performed with adequate accuracy but ambiguity exists in calculations. More precise and/or detailed execution needed.	Most/majority of calculations performed with accuracy and completeness. Steps are conveyed in a sufficient manner. Little or no ambiguity in mathematical calculations	All calculations performed with accuracy and completeness. All steps are conveyed to arrive at solutions. No ambiguity in mathematical calculations and/or steps taken
Technical Presentation (25%)	Graphs and/or tables may be inaccurate and/or not informative. Graphing/display needs some of the following: title, proper styles and coloring, axis magnitudes, tick values/marks, x-label, y-label, annotation text, and points on the graph/table.	Graphs and/or tables are somewhat accurate and informative. Graphing/display includes some of the following: title, proper styles and coloring, axis magnitudes, tick values/marks, x-label, y-label, annotation text, and points on the graph/table.	Graphs and/or tables are accurate and informative. Graphing/display includes most of the following: title, proper styles and coloring, axis magnitudes, tick values/marks, x-label, y-label, annotation text, and points on the graph/table.	Graphs and/or tables are highly accurate and informative. Graphing/display includes title, proper styles and coloring, axis magnitudes, tick values/marks, x-label, y-label, annotation text, and points on the graph/table.
Technical Explanations (25%)	Interpretation of results in written format is only somewhat conveyed. Calculations, graphs, takeaways, and/or strategic or mathematical relationships may be ambiguous in explanations provided.	Interpretation of results in written format is mostly conveyed. Calculations, graphs, takeaways, and/or strategic or mathematical relationships can be mostly understood from explanations provided.	Interpretation of results in written format conveyed adequately. Calculations, graphs, takeaways, and/or strategic or mathematical relationships can be understood from explanations provided.	Interpretation of results in written format is very clearly conveyed. Calculations, graphs, takeaways, and/or strategic or mathematical relationships can be distinctly understood from explanations provided.
Overall Presentation and Strategy (25%)	Recommendations provided and strategic importance of the assignment is not clearly conveyed in the assignment submission. Evidence provided and connections are either not attempted or not clearly made between calculations and/or theory to provide practical application for investors to utilize.	Recommendations provided and strategic importance of the assignment is mostly available in assignment submission. Evidence and connections are made and/or attempted between calculations and/or theory to practical application for investors to utilize.	Recommendations provided and strategic importance of the assignment is available in the assignment submission. Evidence is and connections can be made between calculations and/or theory to practical application for investors to utilize.	Recommendations provided and strategic importance of the assignment is well crafted and on display in the assignment submission. Evidence is provided and connections are clearly made from calculations and/or theory to practical application for investors to utilize.
